Mannington Sourcewell Maintenance Services:

Carpet Interim Maintenance: Interim carpet maintenance is a type of cleaning that bridges the gap between regular vacuuming and deep cleaning. It aims to restore carpet appearance and refresh fibers without the extensive labor and downtime associated with deeper cleaning methods like hot water extraction.

Carpet Restoration: Carpet restoration and maintenance refers to the processes of cleaning, repairing, and revitalizing carpets to improve their appearance, durability, and overall condition. This involves addressing issues like wear and tear, stains, fading, and damage, with the goal of extending the carpet's lifespan and restoring its original functionality. *An example would be hot water extraction of “Fast Foam” method.*

Resilient Flooring: Scrub & Buff: In resilient flooring maintenance, "scrub and buff" refers to a deeper cleaning process beyond daily mopping or spot cleaning. It involves using a machine *(like an auto-scrubber or rotary buffer)* with cleaning solutions and specialized pads to remove ingrained dirt, restore gloss, and address scuffs or scratches.

Resilient Flooring: Scrub & Recoat: Scrub and recoat is a commercial floor maintenance method that deep cleans the top layer of finish and applies new coats, preserving the existing finish while freshening the look. It's a way to refresh the floor's appearance and extend its life without stripping all the existing finish. Scrubbing and recoating will help reduce the frequency stripping and finishing needs to be completed

Resilient Flooring: Restoration of Finish: Restoration, when needed, involves stripping the existing finish and reapplying a new coat to renew the floor's shine and protect it from damage. *(Example would be “stripping and re-waxing”)*
